Language, Affect and Behaviour in AI

ROBOT GUIDE

Pepper

Stay safe, switch it on, and use every part of the Pepper dashboard: conversations, Wizard of Oz and the chest screen.

LabaLab · BGU · Room –132

MEET PEPPER

A body with a screen on its chest

Chest tablet

Shows choices, messages and slides. Visitors answer by tapping it.

Ears and voice

Four microphones and a speaker in the head. Speaks Hebrew and English.

Eyes

Cameras at the top and bottom of the head, plus a depth sensor.

Body

Moving head, arms and hands, and wheels to drive around.

Pepper is the body, your laptop is the brain. The **Pepper dashboard** listens, thinks and speaks through Pepper.

IMPORTANT

Pepper is two devices, not one

</>

Your laptop

Runs the dashboard: listens, thinks, speaks.

→

Device 1

Pepper’s head

The robot: body, mics, speaker, cameras. Its own WiFi address.

→

Device 2

The chest tablet

A separate Android tablet. Its own WiFi, address and power button.

Both must be on the WiFi. The head can be online while the tablet is not.

Tablet chip grey, robot chip green? Only the tablet is lost: press Reload.

On a hotspot, Pepper counts as 2 of its 5 devices.

Add WiFi in Robot Hub teaches the head only. Lab staff teach the tablet separately.

BEFORE YOU TOUCH PEPPER

Four safety rules

Heavy, and falls forward

29.6 kg on wheels. Never lean on it, push its head or pull its arms.

90 cm clear, flat floor

Waking up, it stands, swings its arms and turns to people. No rugs or steps.

Know the emergency stop

Behind the neck, under the soft cover. Find it before you switch on.

Charge every 3 months

At least. An empty battery locks for good. Never let it run flat.

THE CHEST BUTTON

On, off and everything between

Before: hip and knee pins out | **Emergency button released** | **Charging flap closed** | **WiFi already on**

Pepper is	You	What happens
Off	**Press once**	It turns on: about 2 minutes, then it stands up. **Ready when its eyes are white.**
On	**Press once**	It says its name and IP address, and any problem.
On	**Press twice**	Rest: its motors switch off.
On	**Hold 4 s**	Normal shut-down.
Off	**Hold 4 s**	**Never.** It starts a special factory mode.

Shoulder lights: **yellow** = warning, **red** = error. Press the chest once and Pepper says what is wrong.

ROBOT HUB

Open the Pepper dashboard

1. **Pepper on, laptop on HOT-WiFi**
   Or on a hotspot Pepper already knows.

2. **First time only: Set up**
   The card says Needs setup. Set up › Get it (360 MB) › Done.

3. **Pick its two keys on the card**
   Speaks through (GPT) and **Voice key** (ElevenLabs).

4. **Press Connect**
   Pepper says a sentence out loud.

5. **Press Open dashboard**
   It opens on your laptop. Pepper’s tablet gets its own page.

Which keys?

The scripted demo needs both keys: GPT and ElevenLabs.

Free conversation needs only GPT.

No GPT key? The dashboard opens, but there is no AI conversation.

Changed a key? Press Disconnect, then Open dashboard again.

THE PEPPER DASHBOARD

Eight panels, one screen

Top bar

Robot, tablet, keys, More, Logs, Stop everything.

Conversation

Pick an experience and start it.

Wizard of Oz · Say

Make Pepper say anything.

Wizard of Oz · Move

Gestures, head and walking.

Live conversation

Who said what, as it happens.

Event log

Everything that happened. Copy logs for a report.

Pepper’s camera

What Pepper sees, with face boxes.

On Pepper’s screen

The chest tablet, mirrored. Slides live here.

DASHBOARD · TOP BAR

The top bar, part by part

Part	What it shows or does
Robot chip	Pepper’s address, battery, and a mark while it charges.
Tablet chip	Green while the chest tablet checks in. If it stops, press **Reload**.
Volume	Pepper’s speaker volume.
GPT · ElevenLabs	The keys picked on the Robot Hub card.
More	Emoji check, a message on the screen, Lab facts, Rehearse.
Logs	What the dashboard is doing, live.
Stop everything	Ends the conversation and stops Pepper’s app.
AI stopped answering	A red bar. Speak for Pepper from Wizard of Oz, or press **Restart AI**.

DASHBOARD · CONVERSATION

Every setting and button

Setting or button	What it does
Experience	What Pepper does: the scripted demo, the research demo, or free conversation.
Engine	How Pepper hears and speaks: GPT Realtime, or ElevenLabs ears and voice.
Language · Voice	Hebrew, English or Auto, and the voice Pepper speaks with.
Vision	The AI gets a camera picture when the person answers.
AI drives screen	The AI shows choices, messages and slides on the tablet itself.
Gestures	Pepper moves its arms while it talks.
Web search	Free conversation only: Pepper can look things up online.
Start conversation	Pepper speaks first, then waits for an answer.
Repeat question · Skip	Ask the current question again, or move on to the next.

THE LAB DEMO

Run Feelings Together

1. **Experience: Feelings Together (demo)**
2. **Pick the Language and Engine**
   ElevenLabs hears Hebrew or English, sentence by sentence.
3. **Press Start conversation**
   Pepper speaks first. The tablet changes with each question.
4. **The visitor taps or answers out loud**
   If Pepper can’t tell which option, it asks for a tap.
5. **Stuck? Repeat question or Skip**
   No answer for 12 s: Pepper asks once more, then waits.
6. **After the goodbye, Stop everything**

The 9 steps

1 Welcome · 2 How to answer · 3 Is my voice comfortable? · 4 Happy face · 5 Surprised face · 6 Dana’s tower · 7 Look at the screen · 8 Feedback · 9 Bye

Pepper waits its turn

Only a tap or a real answer moves it on. “Hmm” doesn’t count, and the mic is off while Pepper talks.

CHOOSING WELL

Three experiences, two engines

For demos

Feelings Together (demo)

Fully scripted. The same every time. The default.

Fallback

Feelings Together (research demo)

The same idea, led by the AI. Greyed out for now.

Open

Free conversation

Talk about anything. Web search can be on.

Engine	GPT Realtime	ElevenLabs (the default)
Hears	GPT’s own listening	Hebrew or English, each sentence
Speaks	A GPT voice	An ElevenLabs voice (default: Laura)
Needs	An OpenAI key with credit	ElevenLabs and OpenAI keys

DASHBOARD · WIZARD OF OZ · SAY

Speak for Pepper

Button	What it does
A quick phrase	One click: Pepper says it at once. They work even offline.
Type a line, Talk	Pepper says what you typed, in English or Hebrew, in the conversation’s voice.
Stop	Stops Pepper talking.
Pepper’s (voice)	Pepper’s own built-in voice. English only, works without internet.
pause AI (tick)	After your line, the AI stays quiet until you press **Resume AI**.
tell AI (tick)	The AI is told what Pepper just said, so it can carry on from there.
Pause AI	Pauses the AI without Pepper saying anything.
Resume AI	Lets the AI answer again.

Rescue a stuck moment: **Pause AI**, say the right line yourself, then **Resume AI**.

DASHBOARD · WIZARD OF OZ · MOVE

Make Pepper move

Gestures

Wave | Nod yes | Shake no | Both arms up | Arms wide | Right arm up | Left arm up | Open / close hands

Arm moves hold for a second, then Pepper goes back to standing.

Head and posture

Head left | Center | Head right | Stand | Face tracking on / off

⚠ Walking

Pepper drives 1 m forward, turns around, and comes back, slowly.

Refused while charging. Unplug the charger, close the flap, press Walking again.

Keep about 1.5 m clear. It stops by itself 40 cm from things.

Stop motion ends any move at once.

DASHBOARD · SCREEN, CAMERA, TRANSCRIPT

See what Pepper sees and shows

On Pepper’s screen

The chest tablet, mirrored. **Click an option** to tap it for a visitor who points.

Drop images or a PDF: each page becomes a slide. **Prev**, **Next**, **Home**, **Clear**.

Pepper’s camera

What the head camera sees, with boxes around faces.

Switch between **Top** and **Bottom** camera. **Save** keeps a picture.

Live conversation

Who said what: Pepper, the visitor, you, and screen taps.

Heard, not used: speech Pepper ignored. Press **Accept** to count it.

DASHBOARD · MORE

The More menu

Tablet emoji check

The old tablet shows some emoji as empty boxes. Press **Emoji test**, look at the tablet, type the bad numbers, **Mark broken**.

Put on the screen

Show a **Message** or a **Choice** on the tablet yourself, then press **Show**.

Lab facts

The only facts Pepper may say about the lab in free conversation. Lab staff edit them.

Rehearse without the robot

Practise on your laptop: type what the visitor says and tap the tablet on screen. **Start rehearsal**.

BEFORE A DEMO

The demo checklist

- [ ] Battery full, charging flap closed, emergency button released.
- [ ] Head **and tablet** both know today’s WiFi.
- [ ] Robot chip and tablet chip both green. No “fallback”.
- [ ] The day before: Tablet emoji check, photo, Mark broken.
- [ ] Credit on the GPT and ElevenLabs keys.
- [ ] One full run of the scripted demo, start to end.

WHEN SOMETHING GOES WRONG

What you see, and what to do

What you see	What to do
Pepper won’t switch on	The emergency button is pressed. Twist it to release.
Red screen, “tablet said no”	The tablet isn’t on the WiFi. Lab staff teach it the network.
Tablet chip grey	Press Reload. Screen fully dark: the tablet’s own power button.
Keeps dropping off the hotspot	The hotspot is full. Pepper alone takes 2 of its 5 places.
“The AI stopped answering”	Speak for Pepper from Wizard of Oz, then press Restart AI.
Hebrew not heard well	Ask people to speak clearly, or to tap the screen instead.
Walking stops at once	Unplug the charger and close the charging flap.
Vendor chatbot answers mid-talk	Stop the conversation and start it again.
Nothing helps	Copy logs, then Robot Hub › Logs › Save a report for the lab.

REMEMBER

Four habits for a smooth session

Charge between sessions

Back on the charger after every use. Never let it run flat.

Give it space

90 cm when it wakes, 1.5 m when it walks.

Rehearse the day before

Run the demo once, and do the emoji check.

Finish with Stop everything

It hands Pepper back to its own app cleanly.
